

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

Columbia, by the capture of a single male shot on Rock Creek. Mr. P. L. Jouy some years ago reported having seen what he supposed to be a specimen of this bird, but this is the first time the species has been actually taken.—EDWIN M. HASBROUCK, *Washington, D. C.*

**Seiurus noveboracensis notabilis in South Carolina.**—The rapidly increasing list of birds essentially Western, occurring in South Carolina, is further augmented by the capture of an adult male Grinnell's Water Thrush, by the writer, near Chester C. H., April 28, 1888.—LEVERETT M. LOOMIS, *Chester, S. C.*

**Two Records for Long Island, New York.**—*Dendroica palmarum*.—I secured a female at Montauk Point, Sept. 7, 1885. This antedates by over two years the one recorded by Mr. William Dutcher as the first obtained on Long Island (Auk, Vol. V, April, 1888, p. 182). My bird was with a small flock, and at the time I did not suspect its identity.

*Poliioptila cærulea*.—I shot a male at Montauk Point, Sept. 2, 1885. It was in one of the dense thickets common to that locality, and not in company with any other birds. This is, I believe, the third record for Long Island, the first specimen having been taken by Mr. N. T. Lawrence (Auk, II, July, 1885, p. 272) and the second by Mr. de L. Berier (Bull. N. O. C., VI, April, 1881, p. 126). Up to the present writing I know of no other captures of this species on Long Island, although the list of records for New England is now a large one.—JONATHAN DWIGHT, JR., *New York City*.

**Birds at Aiken, S. C.**—The notes below recorded were made at Aiken, South Carolina, in November, 1887.

A female *Quiscalus quiscula æneus*, taken on the 24th, and a single true *quiscula* on the 12th, were the only Grackles observed.

On the morning of the 12th, a flock of about fifty Crossbills (*Loxia curvirostra minor*) swept past me, almost within gunshot, half of them pausing for a moment in the top of a pine near by, then hurrying on to join those in advance, when they were soon and finally lost to view.

A male of the year of *Vireo solitarius alticola*, was taken November 11.

*Thryothorus bewickii* was taken on November 9 and 25, a specimen each day, the only ones observed.—FRANK M. CHAPMAN, *New York, City*.

**Notes on Louisiana Birds.**—Mr. C. S. Galbraith, of Hoboken, N. J., has kindly allowed me to examine a small collection of birds obtained by him at Mandeville, La., during the winter of 1887-88, in which I find a few species of special interest on account of the locality of capture. Among these are the Florida Barred Owl (*Syrnium nebulosum allenii*), the Florida Screech Owl (*Megascops asio floridana*), the Florida Blue Jay (*Cyanocitta cristata florincola*), the Purple and Bronzed Grackles (*Quiscalus quiscula* and *Q. q. æneus*, both typical), and the Cerulean Warbler
